65% of Families were feeling isolated, 95% of them get the better feeling after Home-Start support.

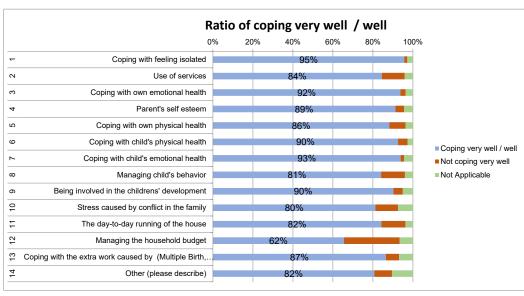

This report is the summary of the Home-Start activities of the all HS schemes in Japan.

Every family's needs was assessed at the start, and measured at the end of support. The top of the 14 categoraized needs is the "Coping with feeling isolated", which means 65% of families were feeling lonely and isolated. The effect of the support is shown as the measure at the end of support, "Coping very well / well " and "Not coping very well". 95% of families feeling isolated answered they had the better feeling after Home-Start support. For 88% of all the needs, families got the better feeling,in average.

| | Avarage of needs per family | 4.8 | | | | | |

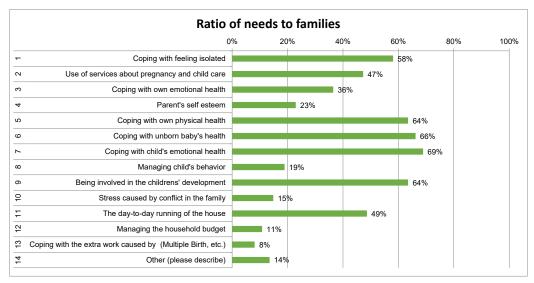

69% of Parents care about child's emotional health, 94% of them feel better after Home-Start support.

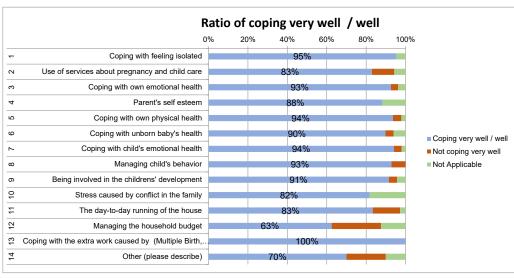

We started to support families before childbirth as a trial in 2015, as a model program in 2016, and as an official program in 2017. "Families with pregnancy" includes families before first childbirth and families with pregnant mother and children.

The top of the 14 categoraized needs is the "Coping with child's emotional health". "Coping with unborn baby's health", "Being involved in the childrens' development", "Coping with own physical health" follow it. Unlike the needs of families with small children, "Coping with feeling isolated" came in fifth place. The satisfaction rate was as high as 90%, which shows that even though they have worries about pregnancy, spending time with a home visitor has helped them face raising their children with peace of mind. For 90% of all the needs, families got the better feeling, in average, which is the same level as the averagefor families with small children. Support for families with pregnancy is often forced to end due to childbirth, so the number of eligible families is still small, but we are expanding our activities to provide seamless support from prenatal to postnatal.

| Families with children under 1 year | 1,228 | 60% |
| Number of All families | 2,046 | |

95% of the families access by themselves. 18% Getting information from health nurse, 17% from community service.

18% of the families got the Home-Start information from health center, and, 16% of the families got the information from the community service. In result, one-third of the families were informed by the local agencies and the community sevice. The network of the local agencies and the servicies are very important for the Home-Start service.

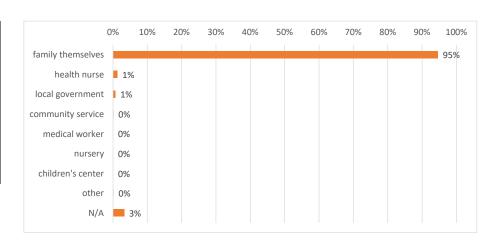

Also, about half of the families are informed through word of mouth. Based on the above, getting the informaion from the trusted people / organization directly is very important for families.

And, 13% of the families repeated using of Home-Start. From the pregnancy period to the after childbirth, Home-Start can be used continuously. We will provide the Home-Start service, by making and keeping good network with the other organizations, and with friendship.

total 16,400 families, 116,000 visits and 3,700 Home Visitors, More needed after the coronavirus pandemic

We have 122 HS schemes. Families supported are about 16,400 by 116,000 visits, increasing of 200-300 families per year until FY2018. However, since the end of January 2020, the new coronavirus has spread rapidly, affecting visiting activities in some areas. In each scheme, various ideas and efforts are being promoted, and the number of families is gradually increasing from around the summer of 2020. And, in 2023, it exceeded pre-coronavirus levels and exceeded 2,000 families for the first time. It seems that the need for Home-Start has been recognized even more during the coronavirus pandemic, and activities have expanded. We will continue to promote activities for parenting and prenatal families nationwide, placing the highest priority on the safety of homes and home visitors.

Home-visitors are about 3,700, supporting the families as volunteers in Home-Start activities of Japan.
